PROFESSIONAL SUMMARY

Performance-driven Senior Frontend Engineer with 7+ years of experience architecting, scaling, and optimizing enterprise-grade digital products across Fintech, Healthcare, and IoT domains. Deep technical expertise in the React ecosystem (React.js, Next.js), JavaScript (ES6+), and TypeScript, with a proven track record of reducing engineering effort by 30%+ through reusable design systems and modular frontend architectures. Adept at driving product quality through component-driven development, server-side rendering (SSR), and CI/CD pipelines while leading cross-functional engineering teams to deliver scalable, high-performance frontend applications.

TECHNICAL SKILLS

Core Frontend:	React.js, Next.js, TypeScript, JavaScript (ES6+), Redux, React Query, Tailwind CSS, HTML5, CSS3
Backend & APIs:	Node.js, Express.js, GraphQL, Prisma ORM, RESTful APIs, WebSockets, MySQL, PostgreSQL
Testing & Tooling:	Jest, Storybook, Git, CI/CD Pipelines, Webpack, Vite
Architecture & Concepts:	Frontend Architecture, SSR & SSG, Performance Optimization, Scalable UI Systems, Design Systems, Component-Driven Development, Core Web Vitals, Agile/Scrum
Additional Frameworks:	Vue.js, Laravel, .NET Framework

PROFESSIONAL EXPERIENCE

COMCAST • SDE-3	Jun 2024 – Present
- Owned end-to-end frontend development for an enterprise broadband e-commerce platform serving millions of users, built with React.js and Next.js in close collaboration with cross-functional product and backend teams. - Engineered a reusable frontend component system and modular UI architecture adopted across 3+ engineering teams, reducing development effort by 30% and improving delivery consistency. - Optimized application rendering performance through SSR strategies and component-level code splitting, improving page load times and Core Web Vitals scores. - Mentored a team of 4 junior developers, established code review standards, and drove frontend best practices across the engineering org.	
LTIMINDTREE • Senior Software Engineer	Sep 2022 – Jun 2024
- Led frontend engineering for an enterprise-grade custom CMS platform for a leading fintech company, serving 500+ internal users, using React.js, Node.js, and REST APIs. - Improved Core Web Vitals scores by 40% through lazy loading, bundle splitting, and strategic caching — significantly reducing time-to-interactive across key admin workflows. - Designed highly flexible UI components and administrative interfaces that eliminated manual workflow bottlenecks, reducing operational friction for internal teams.	

COGNIZANT • Software Developer

Jun 2021 – Sep 2022

- Built an intuitive real-time IoT administration dashboard tracking medical equipment data streams across 10+ global client facilities using React.js, WebSockets, and third-party charting libraries.
- Standardized reusable UI components across React.js and Vue.js codebases, eliminating duplicate implementations and cutting frontend maintenance overhead by ~25%.

SEYASOFT • Web Developer

Jun 2020 – Aug 2021

- Developed customer-facing responsive applications using React.js, handling end-to-end API integration and performance optimizations.
- Achieved 85%+ test coverage across key application modules by implementing structured testing modules with Jest and Enzyme, significantly improving codebase stability.

FREELANCE FRONTEND DEVELOPER • Full-Stack Development

Feb 2019 – Jun 2020

- Delivered React.js and full-stack web development projects for international clients, building practical experience in frontend architecture and API integration.
- Completed MERN Stack and Advanced JavaScript training to formalize software engineering foundations during transition from a non-tech background.

POORVIKA LTD • Site Engineer

Dec 2017 – Feb 2019

Managed on-site technical operations post-graduation before transitioning into software engineering.

HIGHLIGHTED PROJECTS**Broadband E-Commerce Platform**

Tech Stack: React.js, Next.js, TypeScript, GraphQL, Node.js

- Developed a scalable broadband e-commerce platform enabling users to browse plans, manage subscriptions, and complete digital onboarding workflows — serving a high-traffic consumer base.
- Integrated GraphQL APIs and engineered reusable frontend components delivering high-performance, responsive, and maintainable user experiences.

Delivery Platform

Tech Stack: Next.js, Prisma ORM, REST APIs, PostgreSQL (Neon)

- Developed a full-featured delivery platform covering end-to-end workflows — order placement, real-time driver tracking, route management, payment integration, customer notifications, and admin dashboard.
- Built the full stack using Next.js (API routes as backend) and Prisma ORM with Neon serverless PostgreSQL, delivering a unified, maintainable codebase across customer, driver, and admin-facing interfaces.

Reusable Frontend Component System

Tech Stack: React.js, Storybook, Jest, Git

- Designed a shared library of flexible, well-documented UI components using Storybook, adopted across multiple independent web platforms.
 - Standardized component rendering guidelines that increased feature implementation speed while maintaining UI consistency across teams.
-

EDUCATION & CERTIFICATIONS**Bachelor of Engineering • CIT**

2013 – 2017

- MERN Stack Certification • SkillSafari (2019)
- Advanced JavaScript Certification • Udemy (2019)
